B.S./B.A. in Environmental Science and Policy, Duke University, 1997

Kate recently joined EPA's Landfill Methane Outreach Program (LMOP), a voluntary program designed to encourage the development of landfill gas-to-energy projects, as the program's green power coordinator.

Kate came from EPA's recently launched Green Power Partnership, a program that promotes greenhouse gas reductions through the use of renewable energy. Based on her experience with the green power market, Kate now works with green power marketers, energy providers, and the LMOP network of Partners to promote the role of landfill gas as a valuable green power resource. Kate also assists project development by helping to identify potential end users for available landfill gas sources.

Prior to joining the Climate Protection Partnerships Division, Kate was a state, local, and Tribal outreach coordinator in EPA's Chemical Prevention and Preparedness Office, where she developed emergency planning and risk management implementation guidance.

Kate's recent marriage marked the nation's the first wedding to be supported by the purchase of "green tags", representing enough renewable generation to offset the system power used for the event.
